

- 3th 0.0.1 2024-07-11. Type bye to exit.
- > ( Hello and welcome to p3th zine, created during the 2024 Old Computer Challenge. 3th is my in-progress Forth-based stack language. p3th is a name that references p5.js, which is a javascript-based library for graphics programming, ba sed on the Processing library API. I'm calling this p3th cu rrently in honor of p5.js and because i'm attempting to imp lement my own minimal graphics library using similar API. t hough 3th itself compiles to Lua and uses the Love2d graphi cs library. )
- > ( The 3th language is a primitive stack-based language th at can compile words. Some of the words are written in its own language. I used the opportunity of the Old Computer Ch allenge to attempt to transition from building the base language implementation to working on getting graphics calls working in a first attempt.)

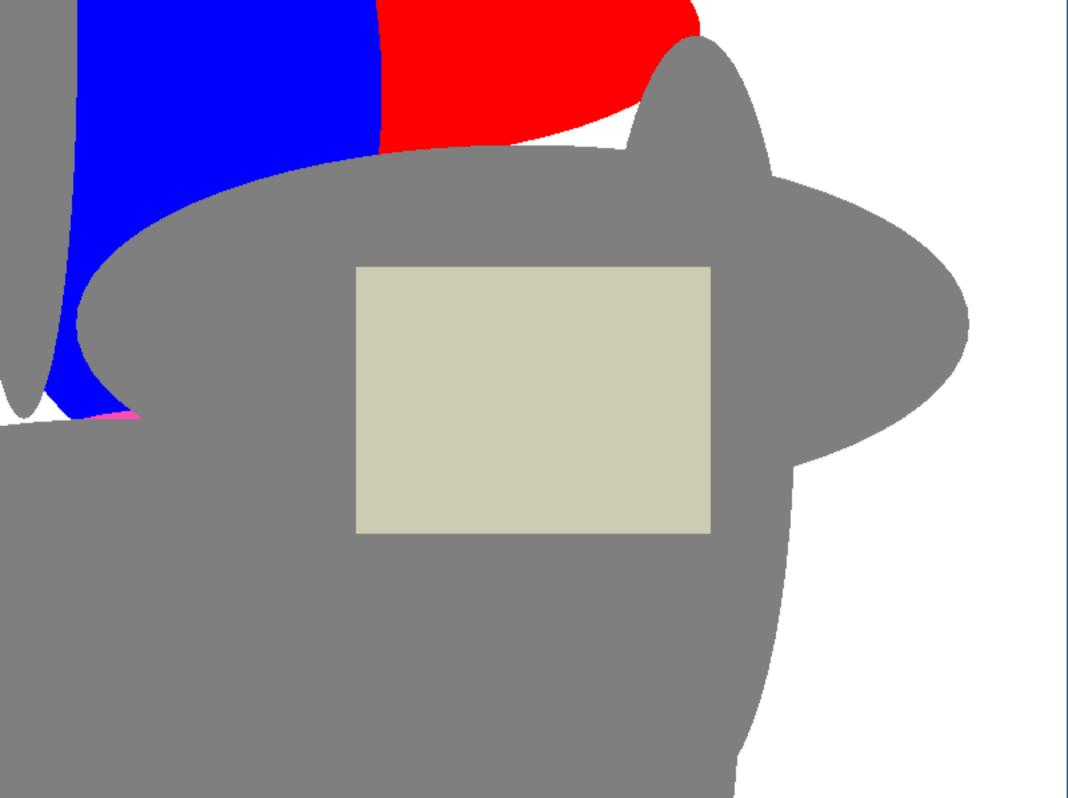

```
> : purple 0.7 0 0.7 color;
> : randomcirc 50 random 50 + setvar width random height ra
ndom getvar getvar ellipse;
> purple randomcirc
```

love.graphics.setColor(0.7,0,0.7,1)love.graphics.ellipse("l

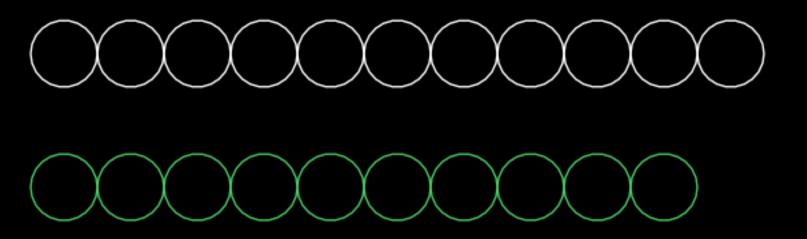

> ( in the line above you can see a rendering of the two us

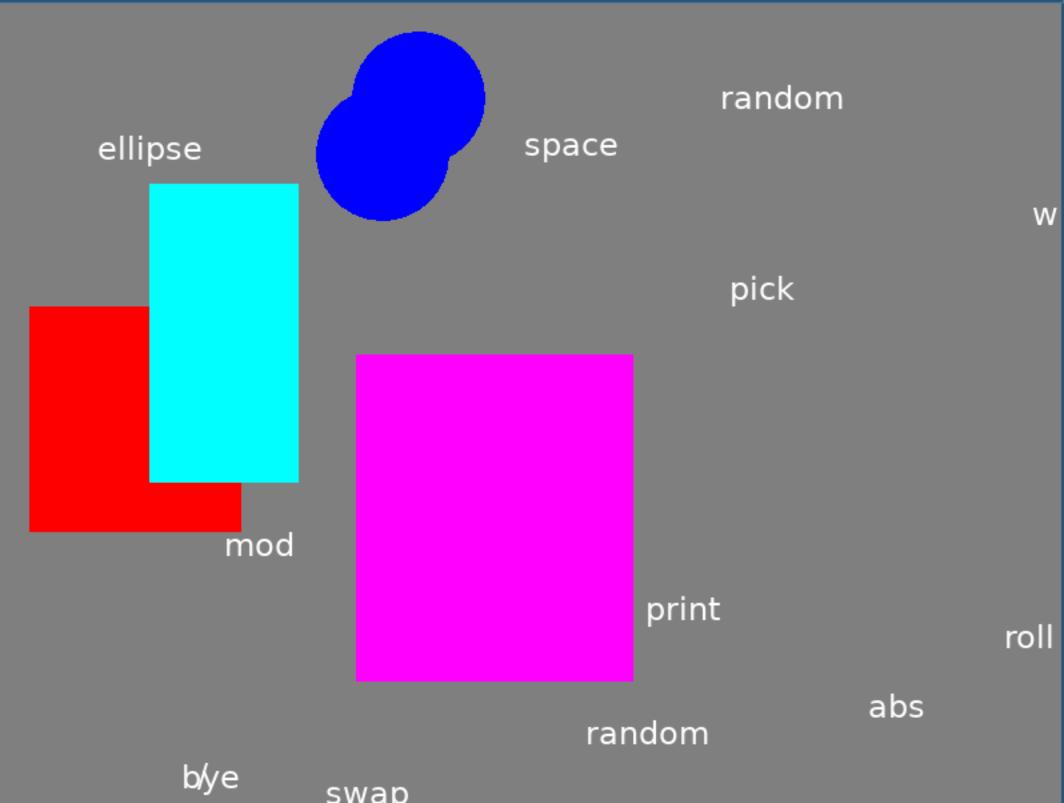

ine",270,498,29.5,29.5)

er-defined words purple and randomcirc )

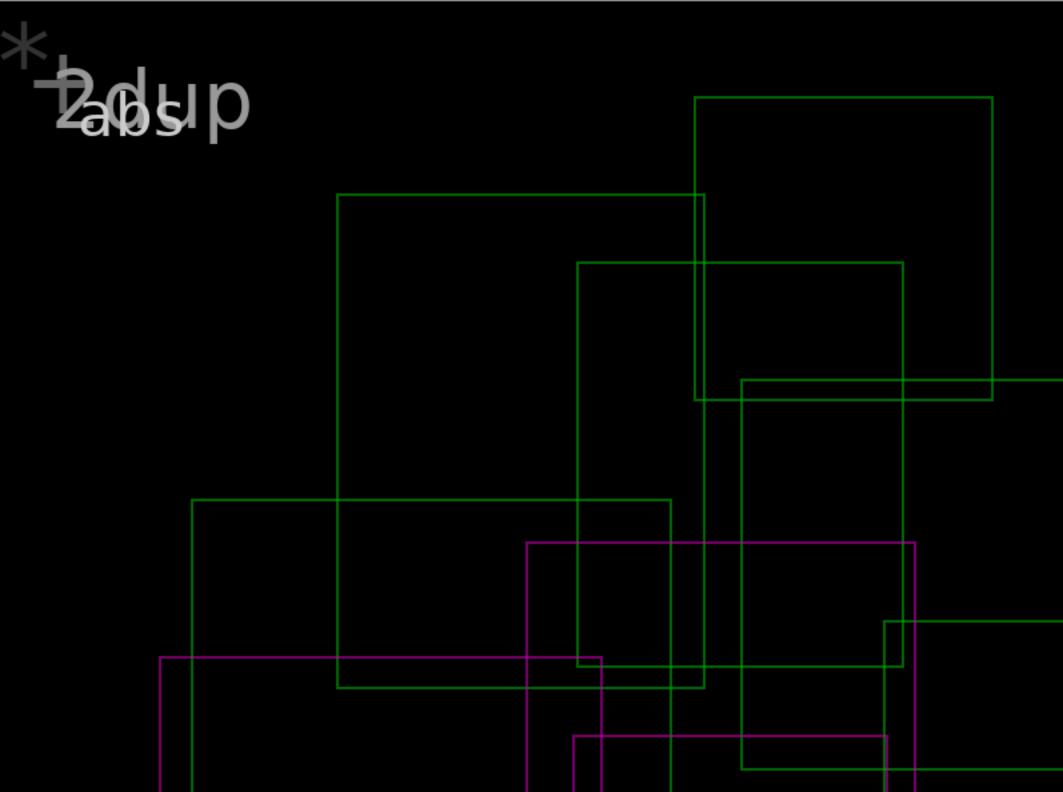

```
> ./3th.lua

> ( this 'zine' was created in july 2024 during the Old Com
puter Challenge 2024. A challenge originally proposed by So
lene Rapenne (dataswamp.org) with the goal of creating usef
ul constraints for a week of computing using old, ancient h
ardware, or emulated hardware, or other self-chosen constra
ints. lots of people interested in perma-computation, retro
-computing, and minimalism (however self-defined) in progra
mming and technology usage participate. more info on the ch
allenge can be found on the bulletin board: https://occ.dea
dnet.se )
